Customer-count source: `output\customer_report.csv` • 1,452 valid frame records

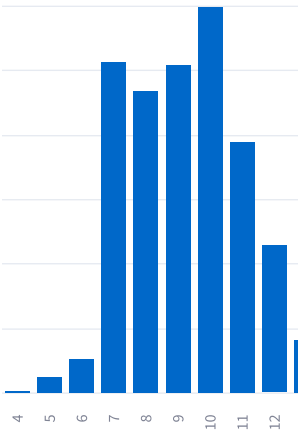

Frames analysed	Average people per frame	Highest frame count	Lowest frame count
1,452	9.30	17	4

Customer Count is the number of people detected in each frame, not a count of unique customers. In the original script, Time records computer processing time rather than the video's exact timestamp.

Customer count by frame

Count distribution

Peak detected count: 17 people at frame 636.

Customer Tracking Analytics

Tracking source: `output\customer_tracking_report.csv` • 13,955 detection records

Tracking detections	Distinct observed Tracking IDs	Max frames observed for one ID
13,955	187	1,159

Tracking IDs are temporary tracker labels, not verified real-world identities. An ID may change, be lost during occlusion, or be reassigned. Frames observed are not exact dwell time or proof of a unique person.

Top Tracking IDs by frames observed

Tracking ID summary

Tracking ID	First_Frame	Last_Frame	Frames_Observed
268	284	1452	1159
3	1	545	522
399	439	1034	459
809	1006	1452	419
511	591	1011	413
22	52	434	383
844	1065	1452	379
516	597	1060	373
702	805	1162	326
307	329	659	322

Showing up to 100 IDs, ordered by frames observed.
